## TIPS Certified Servers

How much do I buy for the bar?

## **Formula for # of Drinks**

**One Drink per Guest per hr.**

**X Number of Bar Hours**

***Example: 150 guests with the bar open for 4 hours = 600 total drinks***

For example, if you have a full bar (beer, wine and mixed drinks), the mixed drinks typically go first. You could estimate 45% mixed drinks, 40% beer and 15% wine. If it's just beer and wine on the menu, you could consider 70-80% Beer and 20-30% Wine.

**WATER = 2 to 3 bottles per person**

**150 (Guests) x 4 (Hours) = 600 Drinks  
600 x 45% = 270 Mixed Drinks  
600 x 40% = 240 Cans of Beer  
600 x 15% = 90 Glasses Wine**

**This is subjective according to the likes of your guests, if you have more wine drinkers then up the percentage of wine and lower the percentage of beer..etc.**

### **Other things to buy:**

**At least 120 lbs ice in buckets/coolers (3 20lbs ice can fit in our freezer), or we are close to gas stations or Meijer for ice (1-2 miles away)**

**Drink napkins**

**Mix drink garnishes (we have dishes and tongs available)**

**Mix drink mix-ins (we have liquor pour spouts available)**

**600 - 9-10 oz clear cups**

**We have bar signs and tip jars available**

**We have wine and can openers available**
